Unpacking

The following items are included in your Fluke 43 kit:

1. Fluke 43 Power Quality Analyzer
2. BP120 Ni-Cd Battery Pack (installed)
3. Power Adapter/Battery Charger
4. TL24 Test Leads, red and black
5. TP1 Flat blade Test Pins, red and black
6. TP4 4mm Test Pins, red and black
7. AC85A Large Jaw Alligator Clips for Banana Plugs, red and black
8. AC20 Industrial Alligator Clips for Banana Plugs, red and black
9. 80i-500s Clamp-on AC Current Probe
10. BB120 Shielded Banana-to-BNC Adapter Plugs (2x black)
11. Applications Guide
13. Product Registration Card with Envelope
14. PM9080/001 Optically Isolated RS232 Adapter/Cable
15. SW43W FlukeView® Power Quality Analyzer software
17. C120 Hard Carrying Case
Safety Information: Read First

Read the safety information before using the Fluke 43.

Specific warning and caution statements, where they apply, will be found throughout the manual.

A “Warning” identifies conditions and actions that pose hazard(s) to the user.

A “Caution” identifies conditions and actions that may damage the Fluke 43.

The following international symbols are used on the Fluke 43 and in this manual:

<table>
<thead>

⚠️ Warning

To avoid electrical shock, use only a Fluke power supply, Model PM8907 (Power Adapter/Battery Charger).
Warning

Do the following to avoid electrical shock or fire if a Fluke 43 common input is connected to more than 42 V peak (30 V rms):

- Use only test leads and test lead adapters supplied with the Fluke 43 (or safety-designed equivalents as specified in the accessory list, see Chapter 2.)
- Do not use conventional exposed metal banana plug connectors.
- Use only one common connection to the Fluke 43.
- Remove all test leads that are not in use.
- The maximum allowable input voltage is 600V. Use test lead adapters that have a rating of 600V or more.
- When powering the Fluke 43, first connect the power adapter to the outlet before connecting it to the Fluke 43.
- Do not insert metal objects into the power adapter connector of the Fluke 43.

Warning

In the scope function it is possible to select AC coupling and to operate time base ranges and amplitude manually. In this case, the measuring results displayed on the screen may not be representative of the total signal. This can result in the presence of dangerous voltages of more than 42 V peak (30 V rms) not being detected. To guarantee user safety, all signals should first be measured with DC coupling. This ensures that the full signal is measured.
The terms ‘Isolated’ or ‘Electrically floating’ are used in this manual to indicate a measurement in which the Fluke 43 COM (common, also called ground) is connected to a voltage different from earth ground.

The term “Grounded” is used in this manual to indicate a measurement in which the Fluke 43 COM (common) is connected to an earth ground potential.

The Fluke 43 common inputs (red INPUT 1 shield, gray INPUT 2 shield, and black 4-mm banana COM input) are connected internally via self-recovering fault protection. This is denoted by the $\psi$ symbol.

The input connectors have no exposed metal and are fully insulated to protect against electrical shock. The black 4 mm banana jack COM (common) can be connected to a voltage above earth ground for isolated (electrically floating) measurements and is rated up to 600V rms above earth ground.

If Safety-Precautions are Impaired

Using the Fluke 43 in a manner not specified may impair the protection provided by the equipment. Before using, inspect the test leads for mechanical damage and replace damaged test leads!

If it is likely that safety has been impaired, turn the Fluke 43 off and disconnect it from the line power. The matter should then be referred to qualified personnel. Safety is likely to be impaired if, for example, the Fluke 43 fails to perform the intended measurements or shows visible damage.

Current Probe

⚠️ Warning

- Use extreme caution when clamping the current probe around uninsulated conductors or bus bars.
- Never use the current probe on circuits rated higher than 600V in overvoltage category III (CAT III) of IEC-1010-1.
- Keep your fingers behind the finger guard.

Do not use a probe that is cracked, damaged, or has a defective cable. Such probes should be made inoperative by taping the clamp shut to prevent operation.
Chapter 1
Introducing the Fluke 43

Powering the Fluke 43

To power the Fluke 43 from a standard AC outlet, perform steps 1-3. For battery power, see Chapter 2.

1. Plug the power adapter in the AC outlet.
2. Connect the power adapter cable to the Fluke 43 (see Figure 2).
3. Turn the Fluke 43 on.

The opening screen will appear on the display (see Figure 3).

Note

If the Fluke 43 does not turn on, the batteries may be dead. Leave the Fluke 43 connected to the outlet for 15 minutes and try again.
The screen shows which test leads or probes you should use on the inputs. Note that in the screen shown in Figure 3, for example, you should use TEST LEADS for voltage measurements and a 1 mV/A current probe for current measurements.

Continue.
Introducing the Fluke 43

Inputs

Figure 4. Measurement Connections

INPUT 1: Use the red test lead on input 1 ( INPUT 1 ).

COM : Use the black test lead on the COM input ( COM ).

Use these inputs for all voltage measurements, and for Ohm, continuity, diode capacitance and temperature measurements.

The Fluke 43 common inputs ( red INPUT 1 shield, gray INPUT 2 shield, and black COM input ) are connected internally via self-recovering fault protection.

INPUT 2: Use the 80i-500s AC current probe on input 2 ( INPUT 2 ).

Use this input only for current measurements. Use the BB120 banana-to-BNC adapter to connect the current probe.

Note

If you use other test leads or probes, change the probe settings in the instrument setup menu (see “Selecting Probes”).
Main Menu

All functions can be easily selected from the main menu.

1. Open the main menu.
2. (for example)

- **INRUSH CURRENT**: Measures inrush current and inrush time (motor start-ups).
- **OHMS / CONTINUITY / CAPACITANCE**: Measures resistance, diodes, continuity and capacitance (DMM).
- **TEMPERATURE**: Measures temperature with optional temperature probe.
- **SCOPE**: Dual channel oscilloscope: Volts on input 1 and Amps on input 2.
**VOLTS / AMPS / HERTZ**

Gives a fast overview of Volts, Amps and Hertz.

**POWER**

Shows all power readings in one screen.

**HARMONICS**

Measures up to 51 harmonics.

**SAGS & SWELLS**

Shows dips and surges as short as one cycle. With time stamp.

**TRANSIENTS**

Captures and stores up to 40 voltage transients.
**Volts / Amps / Hertz**

This function simultaneously shows the voltage and current signal. Use this function to get a first impression of the voltage and current signal before examining the signal in more detail with the other functions.

**Power**

This function measures and displays the following power readings: active power (W), apparent power (VA), reactive power (VAR), power factor (PF), displacement power factor (DPF or cos ϕ) and frequency. The voltage and current waveforms give a visual impression of the phase shifts.

**Harmonics**

Harmonics are periodic distortions of the voltage, current, or power sine wave.

The signal can be conceived of as a combination of various sine waves with different frequencies. The contribution of each of these components to the full signal is shown as a bar.

The large numbers refer to the full signal; the small numbers belong to the selected harmonic component.

**Sags & Swells**

Sags and swells measures fast deviations (from one cycle to a few seconds) from the normal voltage signal, and displays current simultaneously.

The results are plotted on the screen as a graph. The graph shows the minimum and maximum values at each point of the graph.

The SAGS & SWELLS function is particularly useful to record flicker.
Introducing the Fluke 43

Main Menu

**Transients**

Transients are fast spikes on the voltage (or current) signal. Spikes may contain enough energy to damage sensitive electronic equipment.

This function detects spikes on the voltage signal and stores a picture of the signal in memory. A transient is detected when it crosses an envelope around the voltage waveform. The width of the envelope can be set manually.

![Detected and Not Detected Transients](image)

**Inrush Current**

Inrush currents are surge currents which occur, for example, when a large motor is started.

This function shows the current signal at the moment of the surge. If the current exceeds a specified level, the signal appears as a gray band on the display formed by the peak-peak values of the waveshape.

Use **INRUSH CURRENT** to look for inrush currents or other surge currents. Measure the peak current and duration of the surge current.
**Instrument Setup**

To change the instrument’s default settings and prepare the Fluke 43 for use, follow the instructions in this section.

Begin by selecting the **INSTRUMENT SETUP** screen from the main menu.

1. Open the main menu.
2. **INSTRUMENT SETUP**

### Setting the Date

3. **DATE**
4. Adjust the month (MM).
5. Repeat steps 4 and 5 for day (DD) and year (YY).
6. Choose the date format.
7. **MMDDYY** (Oct 24 1998)
   **DOMMYY** (24 Oct 1998)
8. Accept the new date settings.
Introducing the Fluke 43
Instrument Setup

Setting the Time

3  $ TIME
   ⇒ ENTER

4  23 $ Adjust the hours.

5  23 45 $ 59 $ Repeat steps 4 and 5 for minutes and seconds.

6  ENTER  Accept the new time.
Adjusting the Contrast

Adjust the contrast of the screen for optimal visibility of the screen.

1. Open the main menu.
2. INSTRUMENT SETUP
3. CONTRAST
4. Adjust the contrast until both black and grey squares are clearly visible.
5. Accept the new contrast.

Note
You can also adjust the contrast immediately after turning on the Fluke 43 by using the up and down keys.
Selecting Probes

For standard operation, use the red test lead on input 1, the black test lead on COM, and the current clamp on input 2. If you are using other test leads or probes, you must change the probe settings accordingly.

1. Open the main MENU.

2. INSTRUMENT SETUP

3. PROBES

Select the type of probe you are going to use on input 1. For all applications in the Applications Guide, you must use test leads.

4. TEST LEADS (for example)

5. Accept the probe settings for input 1. The screen closes.

6. Select PROBES again.

Select the sensitivity of the current probe you are going to use on input 2. For all applications in the Applications Guide, use the 80i-500s current probe and choose 1 mV/A.

7. Move to the probe settings for input 2.

8. 1 mV/A (for the 80i-500s current probe)

9. Accept the probe settings for input 2.
Setting up the Harmonic- and Power Function

Before using the Harmonic or Power function, setup the Fluke 43 as follows:

1. Open the main MENU.
2. Press INSTRUMENT SETUP and press ENTER.
3. Press FUNCTION PREFERENCES and press ENTER.
4. Press %r (see Table 1) and press %f.
5. Accept the new setting. The screen closes.
6. Select FUNCTION PREFERENCES again.
7. Press DC..21 (see Table 1) DC..33 DC..51.
8. Accept the new setting. The screen closes.
9. Select FUNCTION PREFERENCES again.
10. Press FUNDAMENTAL FULL (see Table 1).
11. Accept the new settings.
### Table 1. Harmonics- and Power Settings

</tbody>
</table>
Selecting a Language

You can choose between English and one other language. To change the language for example into Spanish, do the following:

Note

*Combinations of languages (one or more) depend on the version ordered.*

1. Open the main MENU.
2. Instrument SETUP
3. LANGUAGE
4. ESPAÑOL (for example)
5. Accept the new language.

All text on the display immediately changes to the new language.
Using FlukeView Software

This section explains how to connect the Fluke 43 to a PC for use with the FlukeView® Power Quality Analyzer software or to create reports in MS-Word®.

Use the Optically Isolated RS232 Cable on the optical port to connect the Fluke 43 to a PC (see Figure 5).

Figure 5. Connecting a Computer

Note

For information about how to install and use the FlukeView software, please read the FlukeView SW43W Users Manual.

To create a report in MS-Word, see: “Creating Reports” in Chapter 5 of the Applications Guide.
Using a Printer
This section describes how to connect a printer and how to setup the Fluke 43 for the connected printer.

Connecting to a Printer

Serial printer
Connect the Fluke 43 to a serial printer as shown in Figure 6.

- Use the Optically Isolated RS232 Cable (PM9080).

Figure 6. Connecting a Serial Printer

Parallel printer
Connect the Fluke 43 to a parallel printer as shown in Figure 7.

- Use the Print Adapter Cable (PAC91, optional).

Figure 7. Connecting a Parallel Printer
Selecting a Printer Type

Before using a printer, configure the instrument for the type of printer you will be using and its speed.

1. Open the main MENU.
2. Select INSTRUMENT SETUP.
3. Select PRINTER.

Select the speed of your printer.
Consult the manual that came with your printer to find the optimal baud rate.

4. 9600 Baud (for example)
5. Accept the new baud rate. The screen closes.
6. Select PRINTER again.

Select the type of printer.

7. Move to the right column with printer types.
8. LaserJet (for example)
9. Accept the new printer settings.

Now you are ready to print.

10. Start printing.

The actual screen will be printed.
Resetting the Fluke 43

To restore the Fluke 43 to its factory settings and return to the opening screen, reset the Fluke 43. Resetting does not clear screen memories.

Turn the Fluke 43 off and proceed as follows:

1. Press and hold.
2. Press and release.

The Fluke 43 turns on, and you should hear a double beep, indicating that the reset operation was successful.

(3) Release the HOLD key.

The opening screen with default settings appears on the display.

4. Continue.
Cleaning and Storage

Cleaning the Fluke 43
Clean the Fluke 43 with a damp cloth and a mild soap. Do not use abrasives, solvents or alcohol. These may damage the text on the Fluke 43.

Storing the Fluke 43
When storing the Fluke 43, even for extended periods of time, it is not necessary to remove the battery pack. However, the batteries will gradually decharge. To keep the batteries in optimal condition, charge the batteries periodically (once per month).

Cleaning the Current Probe
Periodically wipe the case with a damp cloth and detergent. Do not use abrasives, solvents or alcohol. Open the jaws and wipe the magnetic pole pieces with a lightly oiled cloth. Do not allow rust or corrosion to form on the magnetic core ends.
Batteries

Charging the Batteries

At delivery, the Ni-Cd batteries must be charged. When fully charged, the batteries typically provide 4 hours of use.

When the Fluke 43 is powered by the battery, the battery icon at the top of the screen informs you about the condition of the battery. The battery symbols are: . The symbol appears when there is less than five minutes of operating time left.

Use the setup as shown in Figure 9 to charge the batteries and power the instrument. To charge the batteries more quickly, turn off the Fluke 43.

Figure 9. Charging the Batteries

Note

No damage will occur to the instrument if you leave it charging for long periods, e.g. during the weekend.
**Extending Battery Operation Time**

Charging the batteries when they are not completely empty, reduces the battery operating time for the Fluke 43. To keep the batteries in optimal condition, observe the following guidelines:

- Operate the Fluke 43 on batteries until the symbol appears at the top of the screen. This indicates that the batteries are very low and that they need to be recharged.

- To extend battery operation time, you can refresh the batteries. During a battery refresh, the batteries will be discharged and charged completely. A complete refresh cycle takes about 12 hours and should be done about four times a year.

1. Open the main menu.

2. Press **INSTRUMENT SETUP** and press ENTER.

3. Press **START BATTERY REFRESH** and press ENTER.

Make sure the Fluke 43 is powered with the power adapter.

4. Press **YES** to continue.

Do not disconnect the power adapter. This will interrupt the refresh cycle.

**Note**

After start of the battery refresh cycle, the screen will be blank. The backlight is on during the refresh cycle.
Replacing the Ni-Cd Battery Pack

It should not usually be necessary to replace the battery pack. If you do want to replace the battery pack, follow the instructions below.

⚠️ Warning
To avoid electrical shock, remove test leads and probes before opening the battery access cover.

1 Disconnect test leads and probes both at the source and at the Fluke 43.
2 Locate the battery access cover on the bottom rear. Loosen the screw with a flat-blade screwdriver.
3 Remove the battery access cover.
4 Take the battery pack out of the compartment.
5 Disconnect the battery plug from the connector.
6 Install a new battery pack.

Note
Ensure that the battery pack is placed in the battery compartment as shown in Figure 10. Use only the Fluke BP120 Ni-Cd battery pack.

7 Reinstall the battery cover and secure the screw.

Note
This instrument contains Nickel-Cadmium batteries. Do not dispose of this battery pack with other solid waste. Used batteries should be disposed of by a qualified recycler or hazardous materials handler. Contact your authorized FLUKE Service Center for recycling information.
Figure 10. Replacing the Battery Pack
**Ordering Codes**

The following tables list the user-replaceable parts for the Fluke 43. For additional optional accessories, see the ScopeMeter Accessories booklet. To order replacement parts or additional accessories, contact your nearest service center.

Fluke 43
Users Manual

Troubleshooting

The Fluke 43 Does Not Start Up

- The batteries may be dead. Charge the batteries first: power the Fluke 43 with
  the power adapter without turning it on. After about 15 minutes, try turning on
  the Fluke 43 again.

The Screen Remains Black

- Make sure that the Fluke 43 is turned on.
- There might be a problem with the contrast. Turn the Fluke 43 off and on
  again. Now use the up and down keys to adjust the contrast.

The Batteries Operate less than Four Hours

- The battery may be in poor condition. Try refreshing the battery as described
  in Chapter 2 “Extending Battery Operation Time”.

FlukeView Does Not Recognize the Fluke 43

- Make sure that the Fluke 43 is turned on.
- Make sure that the interface cable is properly connected between the
  Fluke 43 and the PC.
- Make sure that the correct COM port is selected in FlukeView. If necessary,
  change the COM port setting or connect the interface cable to another
  COM port.

The Printer Does Not Print

- Make sure that the interface cable is properly connected between the
  Fluke 43 and the printer.
- Make sure that you have selected the correct printer type (see Chapter 1:
  “Selecting a Printer Type”).
- Make sure that the baud rate you have selected, matches with the baud rate
  of the printer. If not, select another baud rate (see Chapter 1: “Selecting a
  Printer Type”).
- If you are using the PAC91, make sure that it is turned on.
Chapter 3
Specifications

Introduction

Safety Characteristics

The Fluke 43 has been designed and tested in accordance with the following standards: ANSI/ISA S82.01-1994, EN 61010.1 (1993) (IEC 1010-1), CAN/CSA-C22.2 No.1010.1-92 (including approval), UL3111-1 (including approval) Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use.

This manual contains information and warnings that must be followed by the user to ensure safe operation and to keep the instrument in a safe condition. Use of this equipment in a manner not specified by the manufacturer may impair protection provided by the equipment.

Performance Characteristics

FLUKE guarantees the properties expressed in numerical values with the stated tolerance. Specified non-tolerance numerical values indicate those that could be nominally expected from the mean of a range of identical ScopeMeter test tools.

Environmental Data

The environmental data mentioned in this manual are based on the results of the manufacturer’s verification procedures.
Safety Specifications

Safety Characteristics
Designed and tested for measurements on 600 V rms Category III, Pollution Degree 2 in accordance with:
- EN 61010.1 (1993) (IEC 1010-1)
- ANSI/ISA S82.01-1994
- CAN/CSA-C22.2 No.1010.1-92 (including approval)
- UL3111-1 (including approval)

Installation Category III refers to distribution level and fixed installation circuits inside a building.

⚠️ Maximum input voltage Input 1 and 2
Direct on inputs or with test leads TL24 (see Figure 11)
- 0 to 66 kHz ................................................................. 600 V rms
- > 66 kHz ................................................................. derating to 5 V rms

With Shielded Banana-to-BNC Adapter Plug BB120 (see Figure 11)
- 0 to 400 kHz ................................................................. 300 V rms
- > 400 kHz ................................................................. derating to 5 V rms

⚠️ Maximum floating voltage
From any terminal to ground
- 0 to 400 Hz ................................................................. 600 V rms
Function Specifications

For all specifications, probe specifications must be added.

Electrical functions

Specifications are valid for signals with a fundamental between 40 and 70 Hz.

Minimum input voltage ..................................................4 V peak-peak
Minimum input current ..............................................10 A peak-peak (1 mV/A)
Input bandwidth ........................................... DC to 15 kHz (unless specified otherwise)

Volts / Amps / Hertz

Readings ....................................................V rms (AC+DC), A rms (AC+DC), Hz
Voltage ranges (auto) ...........................................5.000 V to 500.0 V, 1250 V
..................................................................................±(1 % + 10 counts)
Current ranges (auto) ....................................... 50.00 A to 500.0 kA, 1250 kA
..................................................................................±(1 % + 10 counts)
Frequency range .............................................. 10.0 Hz to 15.0 kHz
40.0 to 70.0 Hz ..................................................±(0.5 % + 2 counts)

Power

Readings ....................................................Watt, VA, VAR, PF, DPF, Hz
Watt, VA, VAR ranges (auto)...............250 W to 250 MW, 625 MW, 1.56 GW
when selected: total (%r): ±(2 % + 6 counts)
when selected: fundamental (%f): ±(4 % + 4 counts)
DPF ................................................................. 0.00 to 1.00
0.00 to 0.25 ....................................................... not specified
0.25 to 0.90 ........................................................ ± 0.04
0.90 to 1.00 ....................................................... ± 0.03
PF ................................................................. 0.00 to 1.00
.................................................................................. ± 0.04
Frequency range .............................................. 10.0 Hz to 15.0 kHz
40.0 to 70.0 Hz ..................................................±(0.5 % + 2 counts)

Harmonics

Number of harmonics ........................................... DC..21, DC..33, DC..51
Readings / Cursor readings

V rms / I rms .....................................................fund. ±(3 % + 2 counts)
31st ±(5 % + 3 counts)
51st ±(15 % + 5 counts)
Watt .................................................................fund. ±(5 % + 10 counts)
31st ±(10 % + 10 counts)
51st ±(30 % + 5 counts)
Frequency of fundamental ........................................ ± 0.25 Hz
Harmonics (continued)
Phase .................................................................fund. ±3° ... 51° ± 15°
K-factor (in Amp and Watt) .................................................................± 10 %

Sags & Swells
Recording times (selectable) ................. 4 minutes to 8 days, endless (16 days)
Readings
V rms actual, A rms actual (cycle by cycle calculation) ....±(2 % + 10 counts)
V rms max, A rms max .................................................................±(2 % + 10 counts)
V rms min, A rms min .................................................................±(2 % + 10 counts)
Cursor Readings
V rms max, A rms max .................................................................±(2 % + 12 counts)
V rms average, A rms average .................................................................±(2 % + 10 counts)
V rms min, A rms min .................................................................±(2 % + 12 counts)

Transients
Detection of voltage transients ................................................................. > 40 ns
Useful bandwidth input 1 (with test leads TL24) ...................... DC to 1 MHz
Reference signal ................................................................. V rms, Hz
After START, the V rms and frequency of the signal are measured.
From these data a pure sinewave is calculated.
Detection when transients exceed specified voltage level (selectable)
Voltage levels ............................................ 20 %, 50 %, 100 %, 200 % of reference signal
Number of transient memories (temporary) ................................. 40
Cursor reading
Vpeak min, Vpeak max at cursor ......................................................... ± 5 % of full scale

Inrush Current
Graphic display
Current ranges (selectable) ........... 1 A, 5 A, 10 A, 50 A, 100 A, 500 A, 1000 A
Inrush times (selectable) ...................... 1 s, 5 s, 10 s, 50 s, 100 s, 5 min
Cursor readings
A peak max at cursor 1 ......................................................... ± 5 % of full scale
A peak max at cursor 2 ......................................................... ± 5 % of full scale
Time between cursors ......................................................... ±(0.2 % + 2 pixels)
Specifications
Function Specifications

Scope

Input Impedance
- Input 1: 1 MΩ // 12 pF (± 2 pF)
- Input 2: 1 MΩ // 10 pF (± 2 pF)

Horizontal
- Time base modes (selectable): Normal, Single, Roll
- Ranges (selectable within modes):
  - In Normal: 5 s to 20 ns/div
  - In Single shot: 5 s to 1 µs/div
  - In Roll mode: 60 s to 1 s/div
- Time base error: < ±(0.4 % + 1 pixel)
- Maximum sampling rate:
  - 5 s to 20 ns/div: 5 MS/s
  - 5 s to 1 µs/div: 25 MS/s
- Trigger source (auto): Input 1 or Input 2

Vertical
- Voltage ranges: 5.0 mV/div to 500 V/div
- Trace accuracy: ±(1 % + 2 pixels)
- Bandwidth input 1 (voltage):
  - excluding test leads or probes: DC to 20 MHz (-3 dB)
  - with test leads TL24: DC to 1 MHz (-3 dB)
  - with 10:1 probe PM8918 (optional): DC to 20 MHz (-3 dB)
  - with shielded test leads STL120 (optional): DC to 12.5 MHz (-3 dB)
  - Lower transition point (AC coupling): 10 Hz (-6 dB)
- Bandwidth input 2 (current):
  - with Banana-to-BNC adapter: DC to 15 kHz
  - Lower transition point (AC coupling): 10 Hz (-3 dB)
Scope readings
The accuracy of all scope readings is valid from 18 °C to 28 °C with relative humidity up to 90% for a period of one year after calibration. Add 0.1 x (the specified accuracy) for each °C below 18 °C or above 28 °C. More than one waveform period must be visible on the screen.

V DC, A DC ..................................................................................................................±(0.5 % + 5 counts)

V AC and V AC+DC (True RMS) input 1
DC to 60 Hz...............................................................................................................±(1 % + 10 counts)
60 Hz to 20 kHz..........................................................................................................±(2.5 % + 15 counts)
20 kHz to 1 MHz.........................................................................................................±(5 % + 20 counts)
1 MHz to 5 MHz..........................................................................................................±(10 % + 25 counts)
5 MHz to 20 MHz..........................................................................................................±(30 % + 25 counts)

A AC and A AC+DC (True RMS) input 2
DC to 60 Hz...............................................................................................................±(1 % + 10 counts)
60 Hz to 15 kHz...........................................................................................................±(30 % + 25 counts)

Frequency (Hz), Pulse width, Duty cycle (2.0 % to 98.0 %)
1 Hz to 1 MHz.............................................................................................................±(0.5 % + 2 counts)
1 MHz to 10 MHz.........................................................................................................±(1 % + 2 counts)
10 MHz to 30 MHz........................................................................................................±(2.5 % + 2 counts)

Phase (Input 1 to Input 2)
1 Hz to 400 Hz.............................................................................................................±2°

Peak voltage
Peak max, Peak min ...................................................................................................± 5 % of full scale
Peak-peak ..................................................................................................................± 10 % of full scale

Crest
Range.........................................................................................................................1.0 to 10.0
±(5 % + 1 counts)
Specifications
Function Specifications

Meter

Ohm
Ranges .......................................................... 500.0Ω to 5.000 MΩ, 30.00 MΩ
±(0.6 % + 5 counts)
Max. Measurement Current ...................................................... 0.5 mA
Measurement Voltage at open circuit ........................................... < 4V

Diode
Accuracy ........................................................................... ±(2 % + 5 counts)
Max. Measurement Current ...................................................... 0.5 mA
Measurement Voltage at open circuit ........................................... < 4 V

Continuity
Beep .......................................................... < 30 Ω (± 5 Ω)
Measurement Current ...................................................... 0.5 mA
Detection of shorts ...................................................... > 1 ms

Capacitance
Ranges .......................................................... 50.00 nF to 500.0 µF
±(2 % + 10 counts)
Max. Measurement Current ...................................................... 0.5 mA

Temperature
Ranges (°C or °F) ........................................... -100.0 to +400.0 °C or -200.0 to +800.0 °F
±(0.5 % + 5 counts)

Record
Record times (selectable) ........................................... 4 min to 8 days, endless (16 days)
Number of readings .......................................................... 1 or 2 simultaneously

Record is available for the functions:
• volts / amps / hertz
• power
• harmonics
• ohms / continuity / capacitance
• temperature
• scope
**Fluke 43**
**Users Manual**

**Miscellaneous**

**Display**
- Useful screen area: 72 x 72 mm (2.83 x 2.83 in)
- Resolution: 240 x 240 pixels
- Backlight: Cold Cathode Fluorescent (CCFL)

**Power**

**External**
- Power Adapter: PM8907
- Input Voltage: 10 to 21 V DC
- Power: 5 W typical

**Internal**
- Rechargeable Ni-Cd battery pack: BP120
- Voltage range: 4 to 6 V DC
- Operating Time: 4 hours
- Charging Time: 4 hours with Fluke 43 off, 12 hours with Fluke 43 on
- Refresh cycle: 8 to 14 hours

**Memory**
- Number of screen memories: 10
- Number of transient memories (temporary): 40

**Mechanical**
- Height x width x depth: 232 x 115 x 50 mm (9.1 x 4.5 x 2 in)
- Weight (including battery pack): 1.1 kg (2.5 lbs)

**Interface**
- RS232, optically isolated
- Supported Printers: HP Deskjet®, Laserjet®, PostScript and Epson FX80
  - Serial via PM9080 (optically isolated RS232 Adapter/Cable)
  - Parallel via PAC91 (optically isolated Print Adapter Cable, optional)

**To PC**
- Dump and load settings and data
  - Serial via PM9080 (optically isolated RS232 adapter/cable)
  - using SW43W (FlukeView® Power Quality Analyzer software)
Current Probe

Safety Characteristics
Designed for measurements on 600 V rms Category III. Protection class II, double or reinforced insulation requirements in accordance with:
- IEC 1010-1
- ANSI/ISA S82
- CSA-C22.2 No.1010.1-92
- UL1244

Electrical Specifications
Current range ................................................................. 1A to 500 A rms
AC current over range limit ...................................................... 700 A rms
  Maximum 10 minutes, followed by removal from current carrying
  conductor for 30 minutes.
Output Signal........................................................................ 1mV AC/A AC

Accuracy
5 to 10 Hz
  1 to 500 A ................................................................. -3 dB typically
10 to 20 Hz
  1 to 300 A .................................................................. ± 5 %
  300 to 400 A ............................................................ ± 15 %
  400 to 500 A ............................................................ ± 25 %
20 to 45 Hz
  1 to 500 A ................................................................. ± 5 %
45 to 65 Hz
  1 to 20 A .................................................................... ± 5 % of reading + 0.3 A
  20 to 100 A ................................................................. ±5 % of reading
  ± 3° phase shift
  100 to 500 A ............................................................ ±2 % of reading
  ± 5° phase shift
65 Hz to 3 kHz
  1 to 50 A .................................................................... ±(5 % + 0.4 A)
  50 to 500 A ................................................................. ± 5 %

Influence of temperature on accuracy...................... <0.15 % per 10 °C (18 °F)

Altitude
During operation ................................................................. 2.0 km (6560 feet)
While stored ................................................................. 12 km (40 000 feet)
Environmental Conditions

Environmental ....................................... MIL 28800E, Type 3, Class III, Style B

Temperature
During operation ....................................................... 0 to 50 °C (32 to 122 °F)
While stored ........................................................... -20 to 60 °C (-4 to 140 °F)

Humidity
During operation:
0 to 10 °C (32 to 50 °F) .......................................... non-condensing
10 to 30 °C (50 to 86 °F) ........................................... 95 % ± 5 %
30 to 40 °C (86 to 104 °F) ....................................... 75 % ± 5 %
40 to 50 °C (104 to 122 °F) ...................................... 45 % ± 5 %
While stored:
-20 to 60 °C (-4 to 140 °F) ...................................... non-condensing

Altitude
During operation ..................................................... 4.5 km (15 000 feet)
The maximum input and floating voltage is 600 V rms up to 2 km.
Linearly derating from 600 down to 400 V rms between 2 km to 4.5 km.
While stored .......................................................... 12 km (40 000 feet)

Vibration ................................................................. max. 3g

Shock ................................................................. max. 30g

Electromagnetic Compatibility (EMC)

Emission ................................................................. EN 50081-1 (1992):
EN55022 and EN60555-2
Immunity ............................................................ EN 50082-2 (1992):
IEC1000-4-2, -3, -4, -5
(See also Tables 1 to 3)

Enclosure Protection ......................................................... IP51, ref: IEC529
Electromagnetic Immunity

The Fluke 43, including standard accessories, conforms with the EEC directive 89/336 for EMC immunity, as defined by IEC1000-4-3, with the addition of the following tables.

Disturbance with test leads TL24 or Current Clamp 80i-500s
- Volts / amps / hertz
- Resistance, Capacitance
- Power
- Harmonics

Table 1

<table>
<thead>
<tr>
<th>No visible disturbance</th>
<th>$E = 3\text{ V/m}$</th>
<th>$E = 10\text{ V/m}$</th>
</tr>
</thead>
<tbody>
<tr>
<td>Frequency: 10 kHz - 27 MHz</td>
<td>(-)</td>
<td>(-)</td>
</tr>
<tr>
<td>Frequency: 27 MHz - 1 GHz</td>
<td>(-)</td>
<td>(-)</td>
</tr>
</tbody>
</table>

(-): no visible disturbance

Disturbance with test leads TL24 in scope mode
- $V_{AC+DC}$ (True RMS)

Table 2

<table>
<thead>
<tr>
<th>Disturbance less than 1% of full scale</th>
<th>$E = 3\text{ V/m}$</th>
<th>$E = 10\text{ V/m}$</th>
</tr>
</thead>
<tbody>
<tr>
<td>Frequency: 27 MHz - 200 MHz</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Frequency: 200 MHz - 1 GHz</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(-): no visible disturbance

Table 3

<table>
<thead>
<tr>
<th>Disturbance less than 10% of full scale</th>
<th>$E = 3\text{ V/m}$</th>
<th>$E = 10\text{ V/m}$</th>
</tr>
</thead>
<tbody>
<tr>
<td>Frequency: 10 kHz - 27 MHz</td>
<td>1 V/div</td>
<td>5 V/div</td>
</tr>
<tr>
<td>Frequency: 27 MHz - 200 MHz</td>
<td>200 mV/div</td>
<td>1 V/div</td>
</tr>
<tr>
<td>Frequency: 200 MHz - 1 GHz</td>
<td>(-)</td>
<td>(-)</td>
</tr>
</tbody>
</table>

(-): no visible disturbance

Ranges not specified in Tables 2 and 3 may have a disturbance of more than 10% of full scale.
Declaration of Conformity

for
Fluke 43 Power Quality Analyzer

Manufacturer
Fluke Industrial B.V.
Lelyweg 1
7602 EA Almelo
The Netherlands

Statement of Conformity
Based on test results using appropriate standards, the product is in conformity
with Electromagnetic Compatibility Directive 89/336/EEC
Low Voltage Directive 73/23/EEC

Sample tests
Standards used:

EN 61010.1 (1993)
Safety Requirements for Electrical Equipment
for Measurement, Control, and Laboratory Use

EN 50081-1 (1992)
Electromagnetic Compatibility.
Generic Emission Standard: EN55022 and EN60555-2

EN 50082-2 (1992)
Electromagnetic Compatibility.
Generic Immunity Standard: IEC1000-4 -2, -3, -4, -5

The tests have been performed in a typical configuration.

This Conformity is indicated by the symbol CE, i.e. "Conformité européenne".
LIMITED WARRANTY & LIMITATION OF LIABILITY

Each Fluke product is warranted to be free from defects in material and workmanship under normal use and service. The warranty period is three years and begins on the date of shipment. Parts, product repairs and services are warranted for 90 days. This warranty extends only to the original buyer or end-user customer of a Fluke authorized reseller, and does not apply to fuses, disposable batteries or to any product which, in Fluke's opinion, has been misused, altered, neglected or damaged by accident or abnormal conditions of operation or handling. Fluke warrants that software will operate substantially in accordance with its functional specifications for 90 days and that it has been properly recorded on non-defective media. Fluke does not warrant that software will be error free or operate without interruption.

Fluke authorized resellers shall extend this warranty on new and unused products to end-user customers only but have no authority to extend a greater or different warranty on behalf of Fluke. Warranty support is available if product is purchased through a Fluke authorized sales outlet or Buyer has paid the applicable international price. Fluke reserves the right to invoice Buyer for importation costs of repair/replacement parts when product purchased in one country is submitted for repair in another country.

Fluke's warranty obligation is limited, at Fluke's option, to refund of the purchase price, free of charge repair, or replacement of a defective product which is returned to a Fluke authorized service center within the warranty period.

To obtain warranty service, contact your nearest Fluke authorized service center or send the product, with a description of the difficulty, postage and insurance prepaid (FOB Destination), to the nearest Fluke authorized service center. Fluke assumes no risk for damage in transit. Following warranty repair, the product will be returned to Buyer, transportation prepaid (FOB Destination). If Fluke determines that the failure was caused by misuse, alteration, accident or abnormal condition of operation or handling, Fluke will provide an estimate of repair costs and obtain authorization before commencing the work. Following repair, the product will be returned to the Buyer transportation prepaid and the Buyer will be billed for the repair and return transportation charges (FOB Shipping Point).

THIS WARRANTY IS BUYER'S SOLE AND EXCLUSIVE REMEDY AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. FLUKE SHALL NOT BE LIABLE FOR ANY SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES OR LOSSES, INCLUDING LOSS OF DATA, WHETHER ARISING FROM BREACH OF WARRANTY OR BASED ON CONTRACT, TORT, RELIANCE OR ANY OTHER THEORY.

Since some countries or states do not allow limitation of the term of an implied warranty, or exclusion or limitation of incidental or consequential damages, the limitations and exclusions of this warranty may not apply to every buyer. If any provision of this Warranty is held invalid or unenforceable by a court of competent jurisdiction, such holding will not affect the validity or enforceability of any other provision.
